

call to Chainproof.accessGranted errored: Error occurred: Error occurred: revert.

revert

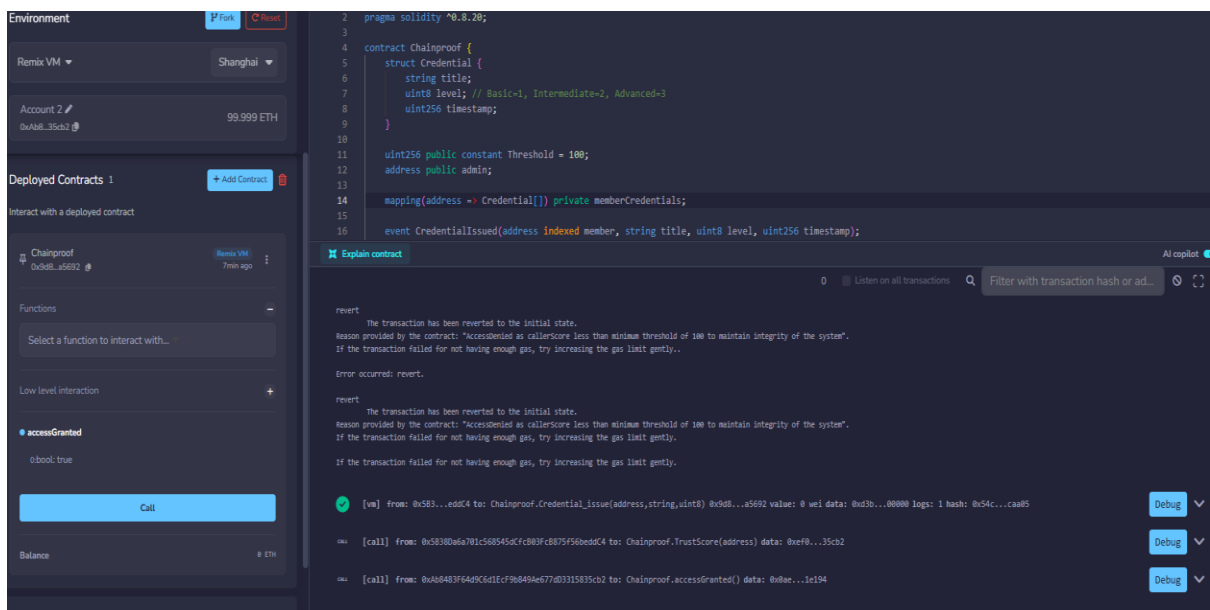

The transaction has been reverted to the initial state.

Reason provided by the contract: "AccessDenied as callerScore less than minimum threshold of 100 to maintain integrity of the system".

If the transaction failed for not having enough gas, try increasing the gas limit gently..

Error occurred: revert.

In the above image we first checked the accessgranted function and it showing error as the trust score of account 1 is insufficient I have also posted a photo of the revert mssg if it was not clearly visible

In the above image we can see a successful access granted call as we can see in the image access granted call gives a bool:true indicating that access granted and as we can see no error is being thrown hence it works correctly
